

Expona Design LVT

This Environmental Product Declaration (EPD) discloses potential environmental outcomes compliant with ISO 14025 for business to business communication.

The declared product Expona Design heterogeneous luxury vinyl tile and plank (LVT) flooring was made by Polyflor Australia in China in 2017 for sale with a 15 year residential warranty and 10 year commercial warranty.

Polyflor is recognised globally as a leading manufacturer of high quality vinyl floor coverings.

It specialises in stylish, durable and low maintenance vinyl flooring that is available in sheet, planks and tiles.

In collaboration with industry partners, Polyflor is working on developing new products and technologies.

They continually evaluate new ideas or alternatives that minimise environmental impacts.

The company strives to be an environmentally and economically sustainable business.

It reports annually on progress in key areas including energy efficiency, recycling, air quality, freight and packaging.

Low emissions of Volatile Organic Compounds (VOC) also enable a healthy indoor environment.

Polyflor is the founding member of Recofloor the vinyl flooring take-back scheme where used vinyl is collected and diverted from landfill to be recycled.

Socially aware, Polyflor has commitments to continuously improve life quality of their workforce and families as well as the larger community.

Polyflor's factories are ISO 14001 Environmental Management Systems certified.

More information is at http://www.polyflor.com.au

1. Details of This Declaration

GreenTag Global Pty Ltd hereafter called Global GreenTag noted at **Program**

www.globalgreentag.com Operator

PLF-020-2017 **EPD Number**

17th September 2018 Date issue 17th September 2021 **Validity**

Reference PCR Compliant with PCR: FC 2017

Made in and sold from 2017 for 20 years use **Time**

Made in China. Uses are assumed as for Australasia. Geography

Commercial and residential interior flooring of luxury vinyl tiles and planks **Application**

Polyflor Expona Design LVT 5.1kg/m² 20 year use cradle to fate **Functional unit**

2. Product Characterisation

Polyflor Expona Design LVT by Polyflor Ltd for use in commercial and **Definition**

residential building interiors

EN ISO 10582 Resilient floor coverings - Heterogeneous poly(vinyl chloride) **Standard**

floor coverings - Specifications

3. Green Star® Certified Credits

Products are relevant to the Green Building Council of Australia's (GBCA) Green Star® scheme. If required this EPD is evidence the declared product meets the following Green Star® credits.

It may be used as evidence in Green Star® submissions for those credits.

The product is certified by GBCA recognised Global GreenTag GreenRate to meet the following credits of Green Star®:

- Performance V1.1: Refurbishment Materials
- Interiors V1.2: Sustainable Products
- Design and As Built V1.2: Sustainable Products

GBCA Disclaimer

Green Star® is a registered mark o off the Green Building Council of Australia (GBCA). Assessments shall not be reproduced in part at any time. Rating Tools and Technical Manuals are subject to change by the GBCA. This EPD provides Technical Opinion and as such is not endorsed by the GBCA or its agents. Green Star® Technical Manuals give technical details of credit requirements.

Expona Design LVT

4. Sustainability Assessment Scores

Table 1 lists Global GreenTag Sustainability Assessment Criteria (SAC) scores prior to weighting and then used to determine the GreenTag EcoPOINT¹.

Table 1 Normalised GreenTag EcoPOINT & SAC Scores

Category Potential	Results (-1 to +1)
Building Synergy	1.00
Health & Ecotoxicity	0.25
Biodiversity	0.62
LCA Score	0.62
Greenhouse Gas Emissions CO _{2eq} ²	0.42
Social Responsibility	0.20
GreenTag EcoPOINT	0.48

SAC scores are normalised against business as usual (BAU) product performing comparable functions under the same category rules. Lower scores show better environmental and social benefits with fewer impacts and damages. Considering sustainability:

- worst case BAU results = 1.0,
- neutral = 0.0 and
- net positive benefit = -1.0

5. Type 1 Ecolabel

The declared product Type 1 Ecolabel achieved

Global GreenTag^{CertTM} Gold PLUS GreenRate Level A

6. Verification of this Declaration

This EPD was approved on 17th September 2018 according to requirements of ISO14025 8.1.3b.

7. Packaging, Installation, Use & Disposal

Packaging Cardboard forms & cartons, plastic wrap & strapping on reused pallets.

Service life Residential and commercial refits vary but 20 year life is assumed typical.

Health Safety & Environment

Apart from compliance to occupational and workplace health safety and environmental laws no additional personal protection is considered essential.

Residual Scrap Mill off-cuts are reused. Installation scrap of 5% is assumed to landfill.

Cleaning Maintenance Scenario The recommended cleaning and maintenance raises no ecosystem or human health concerns. Care and maintenance guides are on company websites.

Weekly detergent spray, light mop, monthly wet machine scrub and cloth dry.

Recycling Home mill, fabrication and installation scrap is reworked into new product.

Re-use This study assumes 60% product is serviceable for reuse over 40 more years.

Disposal It assumes 30% is recycled. Incineration is rare in Australia so none is modelled.

8. Whole of life Performance

Protection

The product does not contain levels of carcinogenic, toxic or hazardous substances that warrant ecological or human health concern cradle to grave.

It passed the Ecospecifier Cautionary Assessment Process (ESCAP) and no issues or red light concerns existed for product human or ecological toxicity.

Effluent The LCI results and ESCAP raised no red light concerns in emissions to water³.

Waste Cradle to grave waste to landfill was 1% hazardous and 99% non-hazardous.

Environmental Protection

Continuous improvement under the maker's certified ISO14001 EMS aims to avoid toxics, waste and pollution plus reduce their material and energy use.

Environmental Health Effects

Installed products are certified as having VOC's compliant with Green Star® IEQ VOC credits for indoor environment⁴ quality credits.

No other potential in-use impacts on environment or health are known.

9. Base Material Origin and Detail

Table 2 lists key components by function, type, key operation, source and amount.

³ According with national standards in ANZECC Guideline For Fresh & Marine Water Quality (2000)

⁴ in accordance with national standards and practice

Expona Design LVT

11. Supply Chain Modelling

Processes to acquire, refine, transport, fabricate, coat, use, clean, repair, reuse and dispose of metal, masonry, ceramic, timber, glass, plastic and composites are modelled. These include those of:

- Mining, extracting and refining resources to make commodities and packaging;
- Acquiring, cultivating, harvesting, extracting, refining produce and biomass;
- Fuel production to supply power and process energy and freight;
- Chemicals use in processing resources, intermediates and ancillaries;
- Process energy, fuel and freight of resources, intermediates and ancillaries;
- Use, cleaning, recoating, repair, recycling, re-use and landfill, as well as
- Infrastructure process energy transformed and material wear loss e.g. tyres.

A flow chart in Figure 2 shows key product supply chain operations from cradle to fate. While all known operations are included not all are shown.

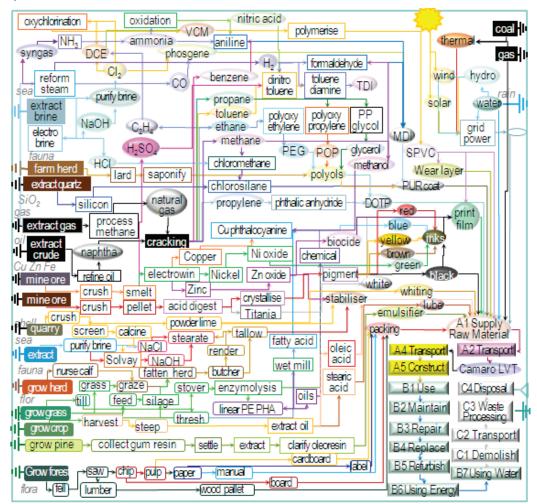

Figure 2 Major Product Operations

Processes

LCA Author
Study Period
LCA Method
The Evah Institute as described at www.evah.com.au
Factory data was collected from 2015 to 2018
Compliant with ISO 14040 and ISO 14044 Standards

Scope Cradle to Fate including all supply chain phases and stages depicted in Figure 2.

Phases The LCA covered all known flows in all known stages cradle to end of life fate.

Assumptions Use is to typical Australian Facility Management professional practice.

Scenarios Use, cleaning, maintenance plus disposal and re-use were scenario-based using

Facility Management Association denoted and published typical operations.

System
Boundaries
The LCA covers all operations in the system boundary depicted in Figure 3.

All known processes are included from resource acquisition, water, fuel & energy use, power generation & distribution, freight, refining, intermediates, manufacture, scrap re-use, packing and dispatch, installation, use, maintenance and landfill. All significant waste and emission flows from all supply chain operations involved to make, pack and install the product are included.

M: Mandatory O: Optional

Evah industry databases cover all known domestic and global scope 1 and 2 operations. They exclude scope 3 burdens from capital facilities, equipment churn, noise and dehydration as well as incidental activities and employee commuting. The databases exist in top zones of commercial global modelling and calculating engines. Quality control methods are applied to ensure:

- Coverage of place in time with all information⁷ for each dataset noted, checked and updated;
- Consistency to Evah guidelines⁸ for all process technology, transport and energy demand;
- Completeness of modeling based on in-house reports, literature and industry reviews;
- Plausibility in 2 way checks of LCI input and output flows of data checked for validity, plus
- Mathematical correctness of all calculations in mass and energy balance cross checks.

Electricity supply models in active databases are updated annually. As each project is modelled and new data is available the databases are updated and audited by external Type 1 ecolabel certifiers.

Expona Design LVT

13. Data Sources Representativeness and Quality

Primary data used for modelling the state of art of each operation includes all known process for:

- Technology sequences;
- Energy and water use;
- · Landfill and effluent plus
- Reliance on raw and recycled material;
- High and reduced process emissions;
- Freight and distribution systems.

Primary data is sourced from clients, Annual Reports and their publications on corporate locations, logistics, technology use, market share, management systems, standards and commitment to improved environmental performance. Information on operations is also sourced from client:

- · Supply chain mills, their technical manuals, corporate annual reports and sector experts, and
- Manufacturing specifications websites and factory site development license applications.

Background data is sourced from the International Energy Agency, IBISWorld, USGS Minerals, Franklin Associates, Boustead 6, Plastics Europe, CML2, Simapro 8, EcoInvent 3 and NREL USLCI model databases. Information on operations is also sourced from:

- Library, document, NPI and web searches, review papers, building manuals and
- Global Industry Association and Government reports on Best Available Technology (BAT).

For benchmarking, comparison and integrity checks inventory data is developed to represent BAT, business as usual and worst practice options with operations covering industry sector supply and infrastructure in Australia and overseas.

Such technology, performance and license conditions were modelled and evaluated across mining, farming, forestry, freight, infrastructure and manufacturing and building industry sectors since 1995.

As most sources do not provide estimates of accuracy, a pedigree matrix of uncertainty estimates to 95% confidence levels of Geometric Standard Deviation² (σ_a) is used to define quality as in Table 4⁹.

Table 4 Data Quality Uncertainty (U) for 2018

Metric σ _g	U ±0.01	U ±0.05	U ±0.10	U ±0.20	U ±0.30
Temporal	Post 2015	Post 2010	Post 2005	Post 2000	Pre 2000

16. Reviewers Report Conclusions

The independent LCA reviewer's report confirmed that the LCA project report and addition information addressed the EPD. The verifier, Shloka Ashar, was not involved in developing the LCA or EPD and has no conflict of interests from their organisational position. While the report is confidential its conclusions confirmed that documentation according to set ISO Standard requirements was provided including evidence from the:

The Evah Institute, the LCA developer:

a) Recipes of input and output data of unit processes used for LCA calculations	
b) Datasheets of measures, calculations, estimates and emails with sources as in Table 6	
e) References to literature and databases from which data was extracted as noted in Table 6	
g) Notes on supply chain processes and scenarios satisfying requirements of this Standard	\checkmark
i) Embodied Energy shares as used for sensitivity analyses re ISO 14044:2006, 4.5.3.3	
j) Proof percentages or figures in calculations in the end of life scenario	\checkmark
k) Notes on proof of % and allocation calculations	\checkmark
o) All operations covered Vs criteria and substantiation used to determine system boundaries	$\sqrt{}$
Product Manufacturer in:	
c) Specifications used to create the manufacturer's product	$\sqrt{}$
d) Citations, references, specifications or regulations & data showing completeness	
f) Specification demonstrating that the building product can fulfil the intended use	
The Certifier Global GreenTag on:	
I) Notes and calculation of averages of different locations yielding generic data	
m) Substantiating additional environmental information ISO 14025:2006, 7.2.4	
n) Procedures for data collection, questionnaires, instructions, confidentiality deeds	$\sqrt{}$
Requiring No Evidence:	
As the EPD is cradle to grave as well as PCR compliant the independent reviewer did not need	to:
h) Substantiate a few stages as all stages were substantiated	
p) Substantiate alternatives when no other choices and assumptions were applied	\checkmark
g) Demonstrate consistency for few stages as the same rules in Tables 5 and 6 applied to all.	

Expona Design LVT

This Environmental Product Declaration (EPD) discloses potential environmental outcomes compliant with ISO 14025 for business to business communication.
